

PRIVATE AREA LIGHTING -- GAS

SCHEDULE PLG

This schedule is cancelled and withdrawn from application for additional lamps, but will be continued for the supply of service at existing facilities.

1. AVAILABILITY: For the lighting of entrances, driveways and other outdoor areas on private property where required by the Customer, provided existing Company main or service facilities are available for supply at the premises to his gas lamp installation of a type acceptable to the Company

2. RATE TABLE

Customer Charge.....	\$6.20 per month per lamp, plus
Delivery Price (For all gas used).....	\$1.27 per hundredth therm of hourly rated burner capacity

3. DELIVERY SERVICE: Firm service transportation of gas through the Company’s distribution system for all customers served under this Schedule.

4. GAS COMMODITY SERVICE:

4.1 BGE Gas Commodity Service: The sale of gas by BGE is provided under the provisions of Rider 2 – Gas Commodity Price, which applies to the terms obtained by multiplying the hourly rated burner capacity by:

- (a) 333 burning hours for the controlled flow of gas where the Customer owns and maintains a photo-cell-actuated gas flow control device approved by the Company; or
- (b) 730 burning hours where the flow of gas is not automatically controlled.

5. SPECIAL PROVISIONS: Contracts hereunder are subject to the following special provisions:

- (a) The Company provides, owns and maintains a connection to the main or service at the premises, and the piping and connection to the lamp, including condensate collector where required. Gas is supplied for 24-hour operation where the flow of gas is not automatically controlled, or for dusk to dawn operation with pilot flow during daylight hours where the gas flow is automatically controlled. The connections are not made under paving except when the Customer agrees to reimburse the Company for its extra cost for such connections. Piping to a lamp in excess of 25 feet is at the expense of the Customer. Where the existing available supply of gas for the lamp is at over-100 psi system pressure and the Company requires that an additional pressure regulator assembly be installed at the base of the lamppost, the Customer pays the estimated installed cost for this additional equipment. This regulator assembly is owned and maintained by the Company. When requested by the Customer, and upon approval of his credit, the charges for the excess piping and for the pressure regulator assembly will be subject to the provisions of Sec. 8.5 - Payment Plans.
- (b) The hourly rated burner capacity in therms is determined from manufacturer's rating or by Company check.

- (c) The Customer agrees to notify the Company promptly of any escape of gas or of unused gas at the lamp because of extinguished flame so that it can proceed to correct the condition and restore service.
- (d) The Company is not liable for any loss, cost, damage or expense to any party resulting from the use or presence of gas in the Customer's facilities.
