Unearth even greater savings with a geothermal system.

A super-efficient alternative to traditional HVAC equipment is a geothermal heat pump, which uses the Earth's natural energy to keep your home comfortable year-round. ENERGY STAR certified geothermal heat pumps:

- Are at least 45% more energy efficient than standard heat pumps.*
- Qualify for a **\$1,800 rebate** from the BGE Smart Energy Savers Program.
- Are eligible for federal tax credits worth 30% of the cost with no upper limit.†

Learn more at BGESmartEnergy.com.

A geothermal system works like this: In the summer, hot air in your home is pushed through a system of underground pipes that use water or a refrigerant to cool the air. The system then sends the chilled air back into your living space. On a cold day, the system works in reverse.

†Consult a tax advisor for more information.

Get rebates from **\$200 to \$1,800** on high-efficiency A/C and heating equipment.

BGE customers everywhere are increasing their homes' comfort, reducing their energy costs and saving even more with rebates from \$200 to \$1,800 on high-efficiency ENERGY STAR certified heating and cooling equipment.

So replace your air conditioning equipment before it fails—and save! Upgrade your heating equipment at the same time to ensure that your whole system performs at peak efficiency and save even more. It's just one of the ways Marylanders are saving energy and money with the BGE Smart Energy Savers Program.

Find a participating contractor today by visiting BGESmartEnergy.com or by calling **877.685.7377**.

This program supports EmPOWER Maryland.
